Digital Certificates

In order to provide a higher-level security environment for internet and intranet applications, The Goizueta Business School uses 128-bit SSL digital certifications from VeriSign and Entrust for our web applications such as SharePoint, Facebook and Password reset utilities. The GBS IS department does not recommend the use of certificates offering less than 128-bit encryption. It is now an industry standard to move away from 40-bit encryption because 128-bit encrypted messages are significantly more difficult to break.
